

iScope Ophthalmoscope

The iScope Ophthalmoscope has been designed to ensure ultimate control. Lenses, graticules and filters can all be introduced at the touch of a fingertip without the need to pull away from the patient.

Positive action may wheel and comprehensive lens range

The positive action, easy access maywheel not only allows you to dial up the required lens quickly, but also gives you total control of where you are in the lens range making each examination quicker and easier.

The extensive range of +29D to -30D in single dioptre steps ensures easy examination of all ocular structures and covers a wide range of patient/user prescriptions. A quick step swing of +/- 20D helps speed up diagnosis.

Swing over filter

The red free filter for enhanced vessel examination can be used in conjunction with any of the 6 diagnostic beams.

Brow rest

The integral soft brow rest allows for easy positioning and protects your lenses if you are a spectacle wearer.

Xenon illumination

The iScope uses Xenon illumination for a bright and whiter long-lasting light. With Xenon light you have the power to diagnose even through cloudy media.
