**X-NIT**

**Product Description:**
X-Nit is a disposable medical device which is used in Scleral fixation IOL surgery. This device helps in simplifying the exteriorization of IOL haptics during IOL implantation and minimizes the trauma during SFIOL surgery.

**Technical Specification:**
- **Model No.**: AXN-26G
- **Needle size**: 26G
- **Scleral marking points**: 1.5mm & 4mm
- **Stopper material**: Silicone
- **Usage**: Single use

**Product Features:**
- A new device for safe and hassle free haptic exteriorization
- Angled needle provides no hassle of bending or breaking
- Specifically designed scleral markers with 1.5 and 4mm to facilitate easy calculation of sclerotomy distance and intrascleral tunnel length
- Double protection silicone stopper to prevent haptic rebound after exteriorization
- Reliable haptic penetration into the silicone stopper holes
- Safety cap to prevent the needle tip damage

**Advantage:**
- Highly useful for anterior segment surgeons and beginners
- Reduces dependency on assistant
- Lesser risk of wound leakage
- Haptic damage is significantly reduced as grasping forceps is not required
- Sutureless intrascleral fixation
- Eliminates the need of large sclerotomy port to introduce intraocular forceps

**Package:**
Packed in a box of two X-nit product
